

TNT

By Dr. Speaker Blower

ABOUT TNT

TNT is a 32 bit PC VST Distortion/Saturation Plugin made in 2009. It was custom made for a client under his specifications and supervision. It was sold as an exclusive so I never mentioned it before. TNT was originally created for audio processing on drums (individual sounds and loops), FX and bass sounds.

My client is no longer a PC user so, to him, this VST plugin is pretty useless nowadays... After insisting for quite a while (and using the fact that this is my 15 year career celebration and it is not used anymore), finally, I managed to get authorization to distribute for free these beauties in my website.

TNT comes in 2 flavours: single band and multi-band. Both have mono and stereo components so we are talking about a total of 4 VST plugins.

Both share the same saturation/distortion algorithms but the single band features a Tone knob that is not present in the multi-band version. This later features a transparent 6dB crossover filter that separates the low and high bands where you can use different saturation/distortion algorithms on each band. There is also a balance knob that helps to level both bands before final output.

These 4 VST plugins also share all the main features of my best plugins, such as:

- No copy protection schemes, serial numbers or need of any USB hardware key
- No hidden viruses, spyware, shitware or anything unrelated with music making software
- Midi learn (right click on the knobs)
- Zero latency
- Full automation
- Modifier keys: **Shift** (fine tuning) and **Control** (default value)
- Clear, intuitive, easy to use GUI
- Vintage sci-fi design

FRONT VIEW

CONTROLS

Distortion/Saturation types:

- 1-Clipper
- 2-Overdrive 1
- 3-Overdrive 2
- 4-Distortion 1
- 5-Distortion 2

Amount: 0 to 100%

Output: from -24 dB to +24 dB

Master Bypass switch

SINGLE BAND VERSION ONLY

Tone: 20 Hz to 20 KHz

MULTI-BAND VERSION ONLY

Crossover Filter: 50 Hz to 10KHz

Balance: 0% - 100% to 100% - 0%

Solo and Bypass switches on each band

ALSO IN BOTH VERSIONS

BACK VIEW

According to my original notes, some of the specs for these plugins were:

- At least 3 different types of saturation/distortion algorithms
- Single Band and Multi-Band versions with mono and stereo components
- Big Knobs
- Low CPU usage
- Simple and vintage style GUI with back view

And, of course, total exclusivity! Until now!

HISTORY

2009

v. 0.8 - Beta Test version

v. 0.9 - Multi-band version added
- Final Beta Test version

V. 1.0 - Back view added

V. 1.1 – Distortion/Overdrive type 2 algorithm added
- Tone control added on single band

2013

V. 1.2 - Special Edition lettering added in GUI
- All my client references in the GUI were erased
- Direct link to Dr. SB site added

FINAL NOTES

Use this plugin for soft saturation or raise the type/amount knobs for harsh distortion! But make sure that you turn down the output gain knob afterwards! It's up to you!

There are no user presets so experimentation is the key to success!

Remember: this plugin was released in my website as I am celebrating 15 years since I started my audio duties as Dr. Speaker Blower. I also released a free LP in my Facebook page so... if you like drum'n'bass, just Like my page and download a free album!

Have fun with it but watch your speakers!
